

KwikFire Quad

Kwikfire responds quickly to a small fire reported in undergrowth. The vehicle is licenced for road use, so can be used on both public highways and off road.

Narrow gateways or restricted access points present no problem to such a small vehicle

When the going starts to get difficult four wheel drive helps!

There are some places even the versatility of a Landrover would struggle

Once at the scene of the incident, the pump and hose reel are quickly put into action, the vehicle carries 50 litres of water, that is discharged at 12 litres per minute by the on board pump.

Once the fire has been dealt with or additional resources have arrived, the Kwikfire returns to base

Or can easily be transported via trailer.
